

Practical Basic Linux Server and Management

Method – Online, 14-15 September 2026

Day 1 - Linux Server Essentials

Module 1: Ubuntu Linux Essentials

- Brief introduction to Linux and Ubuntu Server.
- Linux server use in industry.
- Basic system information: hostname, CPU, memory, disk and IP address.
- Essential command-line usage.

Module 2: File and Directory Management

- Linux filesystem and important directories.
- Navigate between directories.
- Create, copy, move, rename and delete files/directories.
- View, search and edit text files.

Module 3: Users, Groups and Permissions

- Create and manage users and groups.
- Basic sudo/administrator privileges.
- File ownership and permissions.
- Read, write and execute permissions.

Day 1 Mini Practical Challenge

- Create company departments such as ICT, Finance and HR.
- Create users and groups for the departments.
- Create department folders.
- Configure permissions so users can access only the correct department folder.

Day 2 - Network, Web Server and Hosting

Module 4: Network and Remote Administration

- Check IP address, route and network connectivity.
- Basic hostname and static IP concept.
- Install and use OpenSSH Server.
- Remote into Ubuntu Server using SSH.
- Basic APT package management and systemctl service management.

Module 5A: Apache Web Server

- Explain the basic role of a web server.
- Install Apache.
- Start, stop, restart and check the Apache service.
- Deploy a simple HTML website.
- Access the website using the Ubuntu Server IP address.

Module 5B: Nginx Web Server

- Brief introduction to Nginx.
- Compare Apache and Nginx at an introductory level.
- Install and manage Nginx.
- Deploy/test a simple Nginx web page.
- Demonstrate that Apache and Nginx cannot both use the same port unless configured differently.

Module 6: Trainer Demonstration - Real Web Hosting & Cloudflare

- Show a real or prepared cloud/VPS Ubuntu server.
- Explain public IP address and domain name.
- Show a DNS A record pointing a domain to the server.
- Show the Cloudflare dashboard and DNS proxy concept.
- Explain HTTPS/SSL at a high level.
- Open the website using a real domain name.
